

SOFTWARE ENGINEERING

LAB 2: AGILE BACKLOG CREATION & SPRINT

SIMULATION IN JIRA

Project Name: Subscription Management System

NAME : TEJASWINI M

SRN : PES1UG24CS638

SECTION : K

Objective:

To use Jira to convert functional requirements into Epics and User Stories, prioritize and estimate the backlog using Story Points, simulate Agile sprints, and analyze sprint progress.

1. EPICs

Epic 1: Transaction Data Management

Description: Manage and securely process user transaction data.

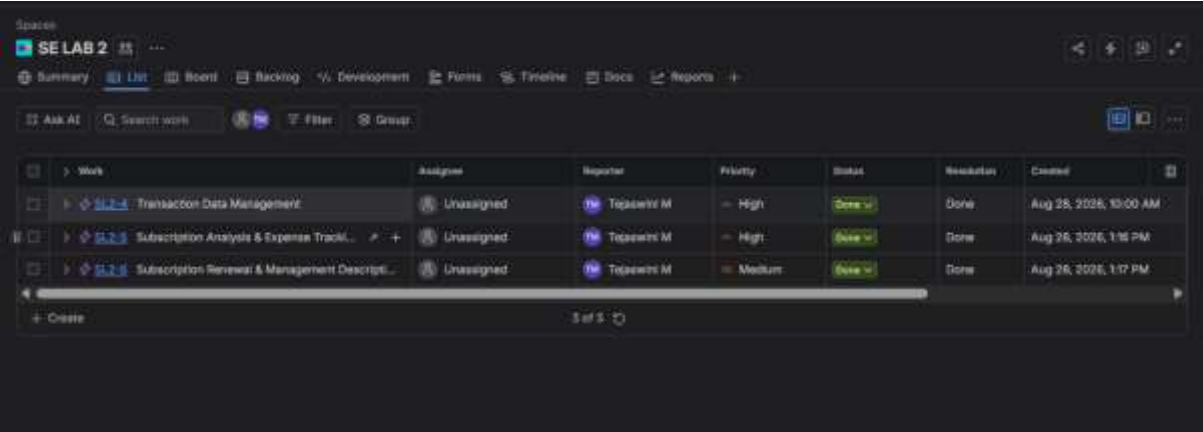

Epic 2: Subscription Analysis & Expense Tracking

Description: Analyze recurring subscription transactions and track recurring expenses.

Epic 3: Subscription Renewal & Management

Description: Help users track subscription renewals and manage unwanted subscriptions.

Epic:

The screenshot shows a Jira board for 'SE LAB 2'. It displays three tasks in a list view. Each task is assigned to 'Tegawini M' and has a status of 'Done'. The tasks are: 'Transaction Data Management', 'Subscription Analysis & Expense Tracking', and 'Subscription Renewal & Management Description'. The board includes a search bar, filters, and a 'Create' button at the bottom.

Work	Assignee	Reporter	Priority	Status	Resolution	Created
Transaction Data Management	Unassigned	Tegawini M	High	Done	Done	Aug 28, 2025, 10:00 AM
Subscription Analysis & Expense Tracking	Unassigned	Tegawini M	High	Done	Done	Aug 28, 2025, 1:15 PM
Subscription Renewal & Management Description	Unassigned	Tegawini M	Medium	Done	Done	Aug 28, 2025, 1:17 PM

2. User Stories:

Epic 1: Transaction Data Management

Story 1: Import Transaction Data

As an individual user, I want to import transaction data, so that the system can analyze my transactions.

Story 2: Secure Transaction Data

As an individual user, I want my transaction data to be processed securely, so that my financial information is protected.

Epic 2: Subscription Analysis & Expense Tracking

Story 3: Analyze Recurring Transactions

As an individual user, I want the system to analyze my transaction data and identify recurring billing patterns, so that I can identify my subscriptions and recurring expenses.

Story 4: View Monthly Burn Rate

As an individual user, I want to view my total monthly recurring

expenses, so that I can understand how much I regularly spend each month.

Epic 3: Subscription Renewal & Management

Story 5: Receive Subscription Renewal Alerts

As an individual user, I want to receive an alert before a subscription renewal date, so that I can avoid unwanted recurring charges.

Story 6: View Subscription Cancellation Guide

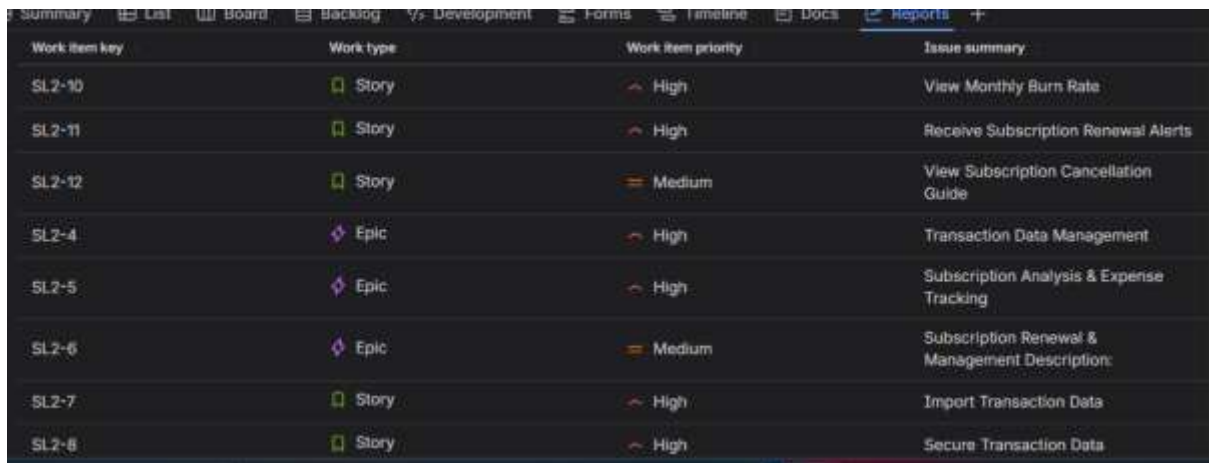

As an individual user, I want to access a cancellation guide for my subscriptions, so that I can easily manage and cancel unwanted subscriptions.

3. Prioritization and Story Point Estimation

User Story	Priority	Story Points
Import Transaction Data	High	3
Secure Transaction Data	High	5
Analyze Recurring Transactions	High	8
View Monthly Burn Rate	High	5
Receive Subscription Renewal Alerts	Medium	5
View Subscription Cancellation Guide	Medium	3

User Story

Priority Story Points

Work item key	Work type	Work item priority	Issue summary
SL2-10	Story	High	View Monthly Burn Rate
SL2-11	Story	High	Receive Subscription Renewal Alerts
SL2-12	Story	Medium	View Subscription Cancellation Guide
SL2-4	Epic	High	Transaction Data Management
SL2-5	Epic	High	Subscription Analysis & Expense Tracking
SL2-6	Epic	Medium	Subscription Renewal & Management Description
SL2-7	Story	High	Import Transaction Data
SL2-8	Story	High	Secure Transaction Data

4. Sprint 1

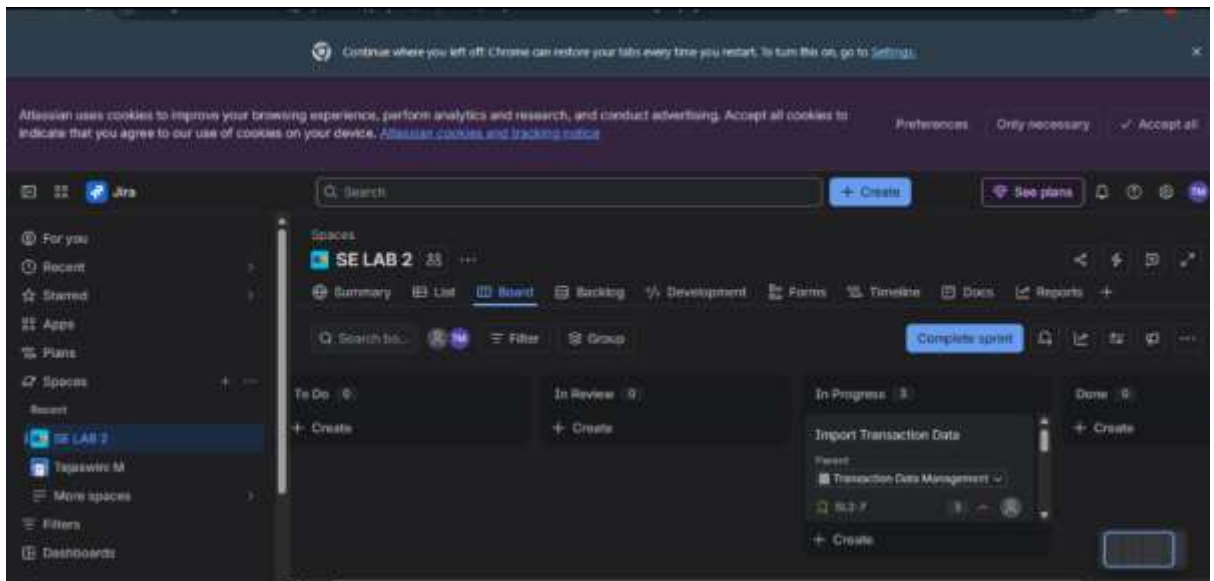

Sprint Duration: 1 Week

Sprint Goal:

Enable users to import transaction data, securely process it, and analyze recurring transactions.

Stories completed:

1. Import Transaction Data
2. Secure Transaction Data
3. Analyze Recurring Transactions

Sprint 1 burden chart:

5. Sprint 2:

Sprint Duration: 1 Week

Sprint Goal:

Enable users to track recurring expenses and effectively manage upcoming subscription renewals.

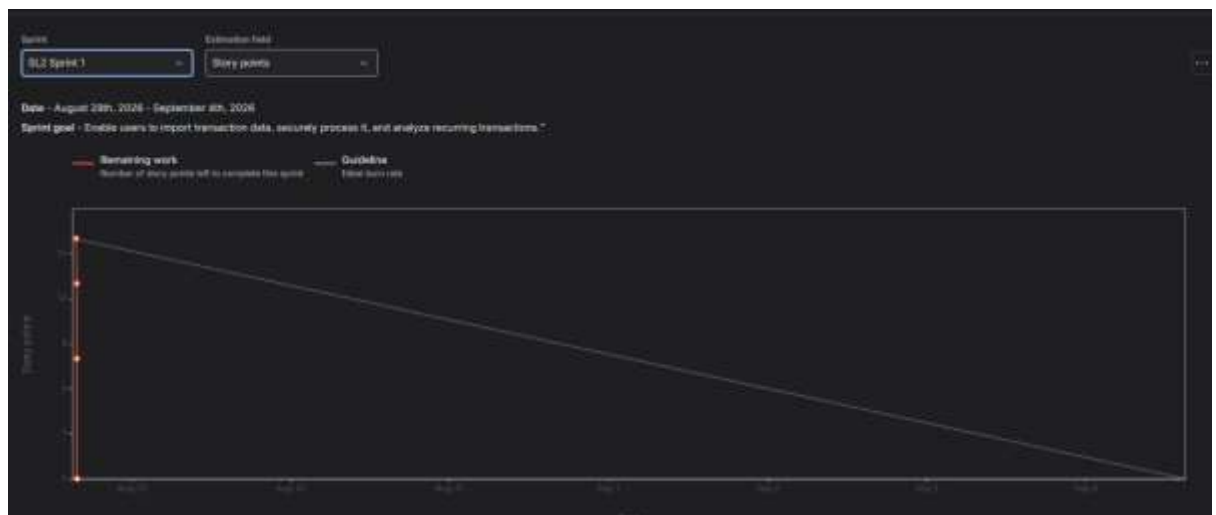

Stories completed:

1. View Monthly Burn Rate
2. Receive Subscription Renewal Alerts
3. View Subscription Cancellation Guide

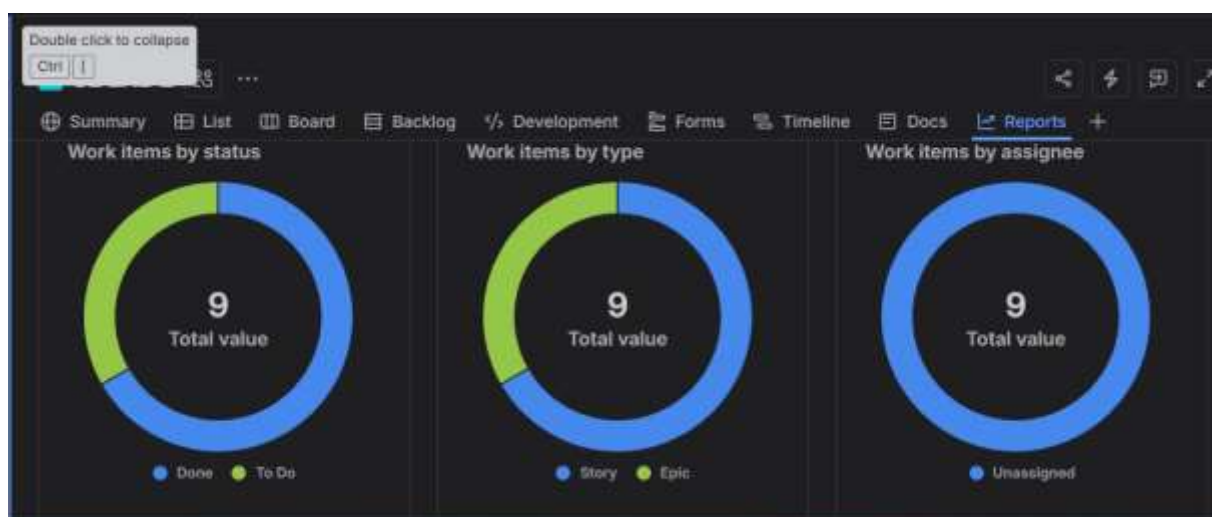

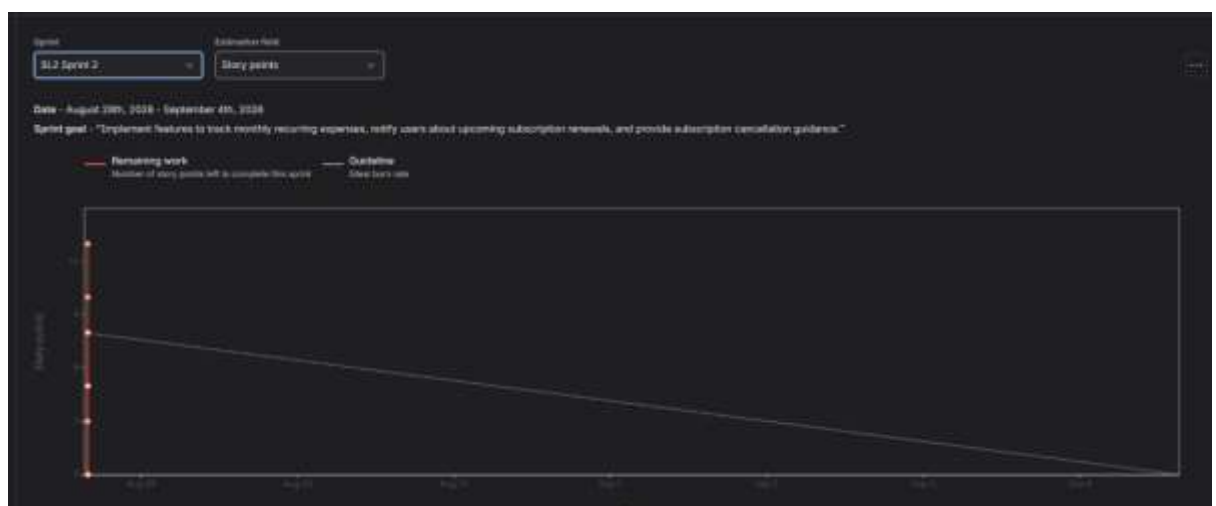

Sprint 2 burden chart:

6.burden chart:

Sprint 1:

Sprint 2:

7. Reflection:

1. Did your estimations reflect the actual effort?

The Story Points provided a reasonable estimation of the relative complexity and effort required for each User Story. More complex features such as recurring transaction analysis were assigned higher Story Points.

2. Was your backlog well-prioritized?

Yes. Core features such as importing transaction data, securing transaction data, and analyzing recurring transactions were given higher priority because they are essential to the system.

3. How did your simulated sprint align with your plan?

The simulated sprints followed the planned backlog order. The User Stories were selected based on priority and completed through the Scrum workflow.

4. What insights did the burndown chart give about your team's capacity?

The Burndown Chart helps show how work was completed during the sprint and provides insight into the team's ability to complete the planned Story Points within the sprint duration.

8. Conclusion

The project requirements were successfully converted into Epics and User Stories using Jira. The backlog was prioritized, Story Points were assigned, and two simulated sprints were completed. This activity helped in understanding Agile backlog management, sprint planning, task tracking, and sprint progress analysis.
